# ROLL COVERINGS from HOLZ

**QUALITY . . . SERVICE . . . ECONOMY** make  
*Holz a best choice for all roll covering requirements.*

## **METAL PROCESSING**

Specify Holz roll coverings for the ultimate in toughness, as well as superior resistance to cutting, acid and high temperatures. Trouble free performance and long life are always obtained from Holz metal processing rolls.

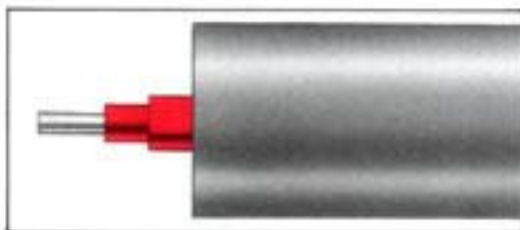

## **FOREST PRODUCTS**

Select from a complete range of elastomers to provide long, trouble free service in all applications from bulk material processing to fine surface graining operations.

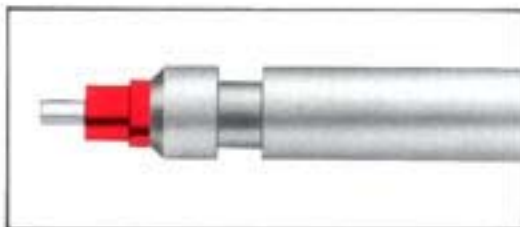

## **BULK MATERIAL HANDLING**

Use Holz Vulco-Lag hot vulcanized pulley lagging for superior performance and longer life compared to outmoded wrapped or cold-cured lagging products. Complete capabilities for special compounds, finishes, grooving and machining operations are available.

## **METAL DECORATING**

Space age research has produced Holz' Supercoat compound which is specifically designed for metal decorators. This unique elastomer provides superior resistance to dimensional changes resulting from solvent, water base and UV coatings.

## **CONVERTING**

Converters can choose from a complete range of standard compounds to meet every need, including laminating, coating, waxing, varnishing, graining and treating. In addition, Holz' R & D capabilities are available to provide new compounds for unusual applications.

Holz offers a unique combination of rubber working skills and experience for the full range of roll covering applications. In addition to complete in-plant processing facilities, Holz has machine shop services available for roll balancing and repair of shafts and cores. Rubber processing capabilities include compounding, mixing, calendaring, curing and machining - all done in the Holz plant to strict quality control standards. For the ultimate in personalized service and quick response to customer needs . . . contact Holz.
